

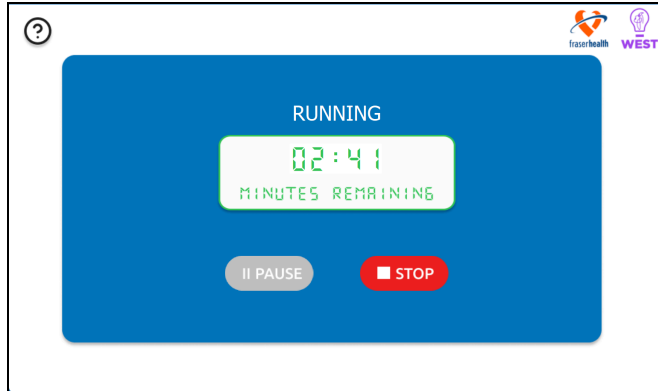

Fig. 4.5 Cycle Running Page

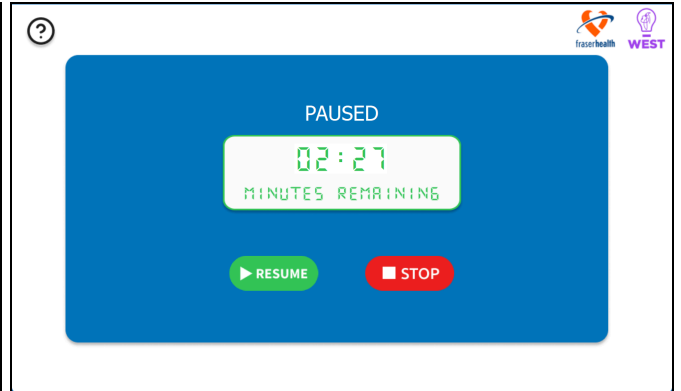

Fig. 4.6 Cycle Paused Page

As the cycle plays the user may press the “PAUSE” button, which pauses the cycle. This can then be resumed using the “RESUME” button later on as seen on *figure 4.6*. If the user presses the “STOP” button, the cycle execution immediately stops and returns the user to the home page. If the cycle completes in its entirety, the user is also automatically returned to the home page.
